

Dear H2R Technology team,

I am applying for the ICT Product Owner role. My career combines enterprise product delivery, requirements and solution design, team leadership and hands-on technical experience, giving me the practical judgement to connect business priorities with achievable squad delivery.

At Gentrack I lead six engineers and partner with stakeholders on quarterly planning, backlog shaping and prioritisation. Previously, I owned implementation and support delivery for a cloud ERP platform serving more than 75 New Zealand and Australian clients, covering discovery, requirements, solution design, configuration, training, go-live and adoption.

I have also introduced practical AI-assisted workflows for legacy analysis, documentation and evidence-based performance reviews. I am comfortable using faster experimentation and feedback cycles while maintaining clear requirements, human review and delivery discipline.

This role particularly appeals because product value and delivery leadership are clearly separated from technical direction, while still requiring enough technical literacy to work credibly with engineers.

Kind regards,

Tanya Poletaeva
