Hiring Team
Sharesies

Engineering Manager

Kia ora,

I am excited to apply for the Engineering Manager role at Sharesies. My family has been investing through Sharesies since 2020, so I have a personal connection to the platform and its purpose of creating financial empowerment. The opportunity to lead a central technology team through operational improvement and emerging tools such as AI strongly appeals to me.

I currently lead a team of six engineers at Gentrack, with responsibility for people leadership, technical direction, delegation, planning, delivery alignment and capability development. I have built a high-trust culture with stronger knowledge sharing and smoother processes, while partnering with stakeholders on quarterly planning, backlog shaping and prioritisation. I also led CI/CD modernisation from Jenkins towards AWS-based pipelines and designed a practical programme to strengthen C# capability across the team.

I enjoy helping teams adopt new technology in a purposeful and responsible way. At Gentrack, I introduced AI-assisted documentation and analysis of legacy solutions. I also designed an AI-assisted performance-review workflow using constrained Jira evidence retrieval, reducing preparation for six reviews from at least one working week to one day while retaining human review and judgement throughout.

My earlier leadership roles add broad operational and commercial experience. At First Software, I led five support analysts and developers and owned support and implementation delivery for a cloud ERP platform serving more than 75 clients across New Zealand and Australia. At Flintfox, I led a development and test pod across scope, technical risk, budgets, timelines, coaching and performance; the team ranked highest in two consecutive performance reviews.

I am based in Whangaparaoa, Auckland, rather than Wellington. I would welcome an Auckland-based remote or hybrid arrangement and would be comfortable travelling to Wellington approximately once a month for purposeful in-person collaboration. I appreciate that this differs from the advertised location, but hope my combination of people leadership, technical depth and dependable operational delivery makes a conversation worthwhile.

I would value the opportunity to discuss how I could help Sharesies build a capable, curious engineering team and keep its central technology systems running reliably as the organisation grows.

Nga mihi,

Tanya Poletaeva
